## Erratum

---

Barbara Mellers, Ralph Hertwig, and Daniel Kahneman, "Do Frequency Representations Eliminate Conjunction Effects? An Exercise in Adversarial Collaboration," *Psychological Science*, Volume 12, Number 4, July 2001, pp. 269–275.

In this article, Mellers, Hertwig, and Kahneman presented what they believed was "a new method for resolving scientific debate" (p. 269). They have since been informed by Edwin Locke that the method, though good, is not new. Locke and two "antagonists," Gary Latham and Miriam Erez, engaged in a similar collaboration described in an article titled "Resolving Scientific Disputes by the Joint Design of Crucial Experiments by the Antagonists: Application to the Erez-Latham Dispute Regarding Participation in Goal-Setting," *Journal of Applied Psychology*, Volume 73, Number 4, 1988, pp. 753–772. Mellers, Hertwig, and Kahneman are most grateful to Locke for the citation, and they regret not having been aware of it prior to publication of their article. They offer their sincere apologies to Latham, Erez, and Locke.
