## Contents

**Preface** xiii

1. Introduction: Good Thinking, Good Teaching, and Alternative Ways of Studying Good Thinking and Good Teaching  1
   - What Is Good Thinking Like?  2
   - The Development of Good Thinking Through Instruction  6
   - Methods of Educational Research  10
   - What's Ahead?  18

Part 1  Good Information Processing  21

2. Strategies and Metacognitive Regulation of Strategies: Basic Theory and Research  23
   - What Is a Strategy?  24
   - Memory Strategies  25
   - Teaching of Strategies  27
   - Metacognition and the Regulation of Strategy Use  29
   - Production Systems and Other Cognitive-Theoretical Considerations Related to the Use and Instruction of Strategies  33
   - Concluding Comments  39
Contents

3 Knowledge 40
   Neural Networks 41
   Concepts 42
   Semantic Versus Episodic Memory 46
   Propositions and Macropropositions 47
   Frames, Scripts, and Schemata 49
   Cases 55
   Verbal and Nonverbal Representations: Imagery and Dual Coding 58
   Productions 61
   Situated Knowledge 65
   Concluding Comments 66

4 The Role of Knowledge in Cognition 68
   Knowledge as a Determinant of Performance 69
   Nature of Expert Thinking 72
   Development of High Competence 79
   Performance Increases with Development:
      Increases in Knowledge or Strategies 81
   Educational Implications 86
   Concluding Comments 87

5 Enhancing Student Motivation 89
   The Need to Understand Academic Motivation
      More Fully: How Motivation and Achievement Can Be Undermined 90
   What Can Be Done to Make School More Motivating and to Create More Motivated Students? 94
   Concluding Comments 111

6 Biological Foundations 113
   Methods in Biologically Oriented Research on Intellect 114
   Neurological Foundations of Cognition, Learning, and Behavior 118
   Biologically Determined Biases and Constraints in Cognition, Learning, and Behavior 121
   How Contemporary Methods Are Increasing Understanding of the Biological Foundations of Academic Competence 126
   Biologically Determined Disruptions of Normal Development 129
   Gender Differences in Cognition 133
   Genetically Determined Modules in the Mind and Multiple Intelligences 137
   Concluding Comments 139
Part 2 Other Grand Theoretical Perspectives 143

7 Classical Theories of Learning and Development 145
   Perceptual Learning 146
   Piagetian Theory of Cognitive Development: Equilibration and Cognitive Conflict as Mechanisms for Learning and Development 148
   Three Classical Mechanisms of Learning: Classical Conditioning, Reinforcement, and Punishment 155
   Cognitive Behavior Modification 164
   Social Learning Theory 167
   Concluding Comments 175

8 Social Interactional Theories of Learning and Development 178
   Vygotsky's Sociocultural Approaches to Mind 179
   Direct Instruction and Explanation 193
   Instructional Conversations 197
   Concluding Comments 203

9 Preparing Students to Think Responsibly About Difficult Social Problems 206
   The Development and Education of Moral Judgment According to Kohlberg 207
   Sex Differences in Moral Reasoning: The Different Voice Identified by Gilligan 213
   From Duality to Relativism to Commitment: The Models of Perry and Erikson 216
   Many Mechanisms for Stimulating Socially Responsible Thinking and Behavior: The Integrative Approach of Lickona 221
   Thoughtful High School Classes at the End of the Twentieth Century: The Works of Newman, Onosko, Brown, and Voss 222
   Concluding Comments 226

Part 3 Important Empirical Contributions in Educational Psychology 229

10 Basic Mechanisms Affecting Learning 231
   Mechanisms Affecting Memory, Comprehension, and Learning 232
   Managing Opportunities to Learn: The Effects of Simple Practice, Distributed Practice, and Tests 247
   Concluding Comments 251
11 Teaching Practices and the Development of Intellect 253
   Effects of Schooling on IQ 254
   Schools That Especially Promote Intellectual Competence 256
   School and After-School Practices Affecting Academic Growth 258
   Explicit Teaching of Thinking in Schools: Thinking Skills Programs 268
   Does Higher Education Promote Cognitive Competence? 274
   Concluding Comments 276

Part 4 Cognition and Instruction 279

12 Science 281
   Misconceptions and Alternative Frameworks 282
   Teaching for Conceptual Change 288
   Development of Scientific Thinking Skills 300
   More Thoughts on Discovery Learning 306
   Concluding Comments 308

13 Mathematical Problem Solving 310
   Instruction of General Problem-Solving Strategies 311
   Instruction That Promotes Mathematical Understanding 315
   Schoenfeld’s Model of Mathematical Cognition 320
   Natural Development of Mathematical Understandings 325
   Applied Research Increasing Understanding of Effective Mathematics Instruction 333
   Mathematics Achievement in Asian Schools 340
   Gender, Race, and Socioeconomic Differences in Mathematics Achievement 342
   Concluding Comments 343

14 Literacy I: Reading 348
   Nature of Good Reading 349
   Emergent Reading During the Preschool Years 352
   Reading During the Elementary Years 354
   Reading During Adolescence and Early Adulthood 373
   Modifying Textbooks So They Are Easier to Read and Understand 375
   Concluding Comments 377
Part 5  Assessment and Individual Differences  401

16  Traditional Assessments and Conceptualizations of Intelligence and Academic Competence  403

Higher Education Admissions Tests  404
Psychometric Qualities of Tests  407
Intelligence Assessment  410
Why Test Intelligence? What Does Psychometric Intelligence Reveal About the Development of Mind?  414
Bias in Mental Testing  422
Concluding Comments  425

17  Alternative Assessments  426

National and State Assessments  427
Dynamic Assessment (Learning Potential Assessment)  439
Curriculum-Based Assessment/Measurement  442
Neuropsychological Assessments  444
Concluding Comments  446

18  Various Types of Learners  448

Mental Retardation  449
Learning Disabilities  453
Giftedness  461
Children Whose Native Language Is Not the Majority Language  465
Differences in Thinking Abilities Across the Life Span  468
Concluding Comments  474
