Contents

List of Tables vi
List of Figures vii
List of Appendixes vii
Preface viii

Chapter 1 Background to the study 1
The work of the CSMS (Mathematics) Project 1
Investigating errors in ratio and proportion: rationale 2
Background to the error in proportional reasoning 5
Research evidence 5
The methods used by children 7
Summary: points for investigation 8
Framework for the SESM research 9
Theoretical perspective 9
Research methodology 9
Form of the report: SESM ratio 10

Chapter 2 SESM interviews (Phase One) 11
Description of the interview sample 11
Selection of schools 11
Selection of the sample for testing 11
Ratio screening test: results 12
Selection of children for interview 12
The Phase One interviews 13
The interview format 13
Analysis of interviews 13
Easy questions 15
The addition type questions 19
Findings 23
Conclusions from interviews 24

Chapter 3 SESM interviews (Phase Two) 25
The interview sample 25
The Phase Two interviews 25
Design of interview items 25
Changes to questions 26
Interviews and analysis 26
Visual confrontation 28
Findings 32
Conclusions from interviews: the basis for the development of the teaching module 32
Chapter 6  Summary and implications

Findings 74
The interview phase 74
  Standard algorithms 75
  The operation of multiplication 75
  Fractions 75
  Visual conflict 75
  The incorrect addition strategy 75
Teaching methods 75
  Content 76
  Class observations 76
  Results of the pilot study 76
  The use of the calculator 76
Class teaching trials 76
  Difficulties of children 77
  Observations on classes 77
  Results 77
Summary 77
Implications for teaching 78
  Interviewing 79
  Child methods 79
  Errors 80
  Use of materials 81
  The calculator 81
  Summary 81
Implications for research 81
  Primary school mathematics (aged 5 to 11) 82
  Secondary school mathematics (aged 11 to 16) 82

Appendixes 84
