**PART 1: INTRODUCTION**

1 **HOW A META-ANALYSIS WORKS** 3
   - Introduction 3
   - Individual studies 3
   - The summary effect 5
   - Heterogeneity of effect sizes 6
   - Summary points 7

2 **WHY PERFORM A META-ANALYSIS** 9
   - Introduction 9
   - The streptokinase meta-analysis 10
   - Statistical significance 11
   - Clinical importance of the effect 12
   - Consistency of effects 12
   - Summary points 14

**PART 2: EFFECT SIZE AND PRECISION**

3 **OVERVIEW** 17
   - Treatment effects and effect sizes 17
   - Parameters and estimates 18
   - Outline of effect size computations 19

4 **EFFECT SIZES BASED ON MEANS** 21
   - Introduction 21
   - Raw (unstandardized) mean difference $D$ 21
   - Standardized mean difference, $d$ and $g$ 25
   - Response ratios 30
   - Summary points 32
Performing a fixed-effect meta-analysis
Summary points

12 RANDOM-EFFECTS MODEL
Introduction
The true effect sizes
Impact of sampling error
Performing a random-effects meta-analysis
Summary points

13 FIXED-EFFECT VERSUS RANDOM-EFFECTS MODELS
Introduction
Definition of a summary effect
Estimating the summary effect
Extreme effect size in a large study or a small study
Confidence interval
The null hypothesis
Which model should we use?
Model should not be based on the test for heterogeneity
Concluding remarks
Summary points

14 WORKED EXAMPLES (PART 1)
Introduction
Worked example for continuous data (Part 1)
Worked example for binary data (Part 1)
Worked example for correlational data (Part 1)
Summary points

PART 4: HETEROGENEITY

15 OVERVIEW
Introduction
Nomenclature
Worked examples

16 IDENTIFYING AND QUANTIFYING HETEROGENEITY
Introduction
Isolating the variation in true effects
Computing Q
Estimating $\tau^2$
The $I^2$ statistic

**PART 5: COMPLEX DATA STRUCTURES**

**22 OVERVIEW**

**23 INDEPENDENT SUBGROUPS WITHIN A STUDY**
- Introduction | 217
- Combining across subgroups | 218
- Comparing subgroups | 222
- Summary points | 223

**24 MULTIPLE OUTCOMES OR TIME-POINTS WITHIN A STUDY**
- Introduction | 225
- Combining across outcomes or time-points | 226
- Comparing outcomes or time-points within a study | 233
- Summary points | 238

**25 MULTIPLE COMPARISONS WITHIN A STUDY**
- Introduction | 239
- Combining across multiple comparisons within a study | 239
- Differences between treatments | 240
- Summary points | 241

**26 NOTES ON COMPLEX DATA STRUCTURES**
- Introduction | 243
- Summary effect | 243
- Differences in effect | 244

**PART 6: OTHER ISSUES**

**27 OVERVIEW**

**28 VOTE COUNTING - A NEW NAME FOR AN OLD PROBLEM**
- Introduction | 251
- Why vote counting is wrong | 252
- Vote counting is a pervasive problem | 253
- Summary points | 255

**29 POWER ANALYSIS FOR META-ANALYSIS**
- Introduction | 257
- A conceptual approach | 257
- In context | 261
- When to use power analysis | 262

PART 8: FURTHER METHODS

35 OVERVIEW

36 META-ANALYSIS METHODS BASED ON DIRECTION AND \textit{p}-VALUES
   Introduction
   Vote counting
   The sign test
   Combining \textit{p}-values
   Summary points

37 FURTHER METHODS FOR DICHOTOMOUS DATA
   Introduction
   Mantel-Haenszel method
   One-step (Peto) formula for odds ratio
   Summary points

38 PSYCHOMETRIC META-ANALYSIS
   Introduction
   The attenuating effects of artifacts
   Meta-analysis methods
   Example of psychometric meta-analysis
   Comparison of artifact correction with meta-regression
   Sources of information about artifact values
   How heterogeneity is assessed
   Reporting in psychometric meta-analysis
   Concluding remarks
   Summary points

PART 9: META-ANALYSIS IN CONTEXT

39 OVERVIEW

40 WHEN DOES IT MAKE SENSE TO PERFORM A META-ANALYSIS?
   Introduction
   Are the studies similar enough to combine?
   Can I combine studies with different designs?
   How many studies are enough to carry out a meta-analysis?
   Summary points

41 REPORTING THE RESULTS OF A META-ANALYSIS
   Introduction
   The computational model
Forest plots 366
Sensitivity analysis 368
Summary points 369

42 CUMULATIVE META-ANALYSIS 371
   Introduction 371
   Why perform a cumulative meta-analysis? 373
   Summary points 376

43 CRITICISMS OF META-ANALYSIS 377
   Introduction 377
   One number cannot summarize a research field 378
   The file drawer problem invalidates meta-analysis 378
   Mixing apples and oranges 379
   Garbage in, garbage out 380
   Important studies are ignored 381
   Meta-analysis can disagree with randomized trials 381
   Meta-analyses are performed poorly 384
   Is a narrative review better? 385
   Concluding remarks 386
   Summary points 386

PART 10: RESOURCES AND SOFTWARE 391

44 SOFTWARE 391
   Introduction 391
   The software 392
   Three examples of meta-analysis software 393
   Comprehensive Meta-Analysis (CMA) 2.0 395
   RevMan 5.0 398
   Stata macros with Stata 10.0 400
   Summary points 403

45 BOOKS, WEB SITES AND PROFESSIONAL ORGANIZATIONS 405
   Books on systematic review methods 405
   Books on meta-analysis 405
   Web sites 406
