AN INTRODUCTION TO

Probability and
Inductive Logic

IAN HACKING
University of Toronto
Collège de France
## Contents

A Note on the Cover Illustration  
Foreword  
Odd Questions  

**LOGIC**  
1 Logic  
2 What Is Inductive Logic?  

**HOW TO CALCULATE PROBABILITIES**  
3 The Gambler’s Fallacy  
4 Elementary Probability Ideas  
5 Conditional Probability  
6 The Basic Rules of Probability  
7 Bayes’ Rule  

**HOW TO COMBINE PROBABILITIES AND UTILITIES**  
8 Expected Value  
9 Maximizing Expected Value  
10 Decision under Uncertainty  

**KINDS OF PROBABILITY**  
11 What Do You Mean?  
12 Theories about Probability  

**PROBABILITY AS A MEASURE OF BELIEF**  
13 Personal Probabilities  
14 Coherence  
15 Learning from Experience
Contents

PROBABILITY AS FREQUENCY

16 Stability 189
17 Normal Approximations 201
18 Significance and Power 209
19 Confidence and Inductive Behavior 229

PROBABILITY APPLIED TO PHILOSOPHY

20 The Philosophical Problem of Induction 247
21 Learning from Experience as an Evasion of the Problem of Induction 256
22 Inductive Behavior as an Evasion of the Problem of Induction 261

Answers to the Exercises 269
Further Reading 293
Index 300
