CONTENTS

Foreword ix
Preface xii

1 | INTRODUCTION 1

1.1 What Is Chaos?  4
1.2 Bifurcations and Chaos  6
1.3 The Hunt for Chaos  17
1.4 Mathematical Models and Data  21

2 | MODELS 27

2.1 The Deterministic LPA Model 29
2.2 The Flour Beetle 36
2.3 Dynamics of the LPA Model 41
2.4 A Stochastic LPA Model 46
2.5 Parameter Estimation 53
2.6 Model Validation 58
  2.6.1 Model Fit 59
  2.6.2 Prediction Fit 60
2.7 Predicted Dynamics 62
  2.7.1 Deterministic Dynamics 63
  2.7.2 Stochastic Dynamics 67
2.8 Concluding Remarks 77

3 | BIFURCATIONS 81

3.1 A Bifurcation Experiment 81
  3.1.1 The Experimental Design 84
  3.1.2 Parameterization 85
  3.1.3 Model Evaluation 88
3.2 The Experimental Results 91
3.3 Concluding Remarks 98
4 | CHAOS  101
4.1 A Route-to-Chaos  102
4.2 Demographic Variability  107
4.3 Analysis of the Experiment  112
  4.3.1 Parameter Estimation  113
  4.3.2 Model Evaluation  120
  4.3.3 Population Dynamics  123
  4.3.4 Transients and Effects of Stochasticity  138
4.4 Concluding Remarks  143

5 | PATTERNS IN CHAOS  147
5.1 Sensitivity to Initial Conditions  149
5.2 Temporal Patterns  153
5.3 Lattice Effects  159
5.4 Concluding Remarks  171

6 | WHAT WE LEARNED  173

BIBLIOGRAPHY  183

APPENDIX  195
  A The Desharnais Experiment  195
  B The Bifurcation Experiment  196
  C The Chaos Experiment  213

Index  223
