Bipartite Graphs and their Applications
Contents

Preface vii
Notation xi

Chapter 1
1.1 Graphs 1
1.2 Partially ordered sets 4
1.3 Reducibility of problems and NP-completeness 4

Chapter 2
2.1 Recognising bipartite graphs 7
2.2 Bipartite graphs of certain types 10
2.3 Matrix characterisations of bipartite graphs 15
Application 20

Chapter 3
3.1 Radius and diameter 23
3.2 Metric properties of trees 28
3.3 Metric properties of the n-cube 32
Application 39

Chapter 4
4.1 k-connected graphs 45
4.2 k-edge-connected graphs 48
Application 52

Chapter 5
5.1 Properties of maximum matchings 56
5.2 Finding a maximum matching 59
5.3 Maximum matchings in convex bipartite graphs 65
5.4 Stable matchings 67
Application 71

Chapter 6
6.1 Graphs with Hall’s condition 75
6.2 Expanding graphs 82
6.3 Expanders 85
Application 90

6.4 Expanders and sorters
Chapter 7 Subgraphs with restricted degrees 97
  7.1 \((g,f)\)-factors 97
  7.2 Subgraphs with given degrees 100
  7.3 2-factors and Hamilton cycles 106
  7.4 \(T\)-joins 114
    Application 118
  7.5 Isomer problems in chemistry 118

Chapter 8 Edge colourings 125
  8.1 Edge colourings and timetables 125
  8.2 Interval edge colourings 130
  8.3 List colourings 138
  8.4 Colour-feasible sequences 144
  8.5 Transformations of proper colourings 150
  8.6 Uniquely colourable bipartite graphs 156
    Application 160
  8.7 Rearranged telephone networks 160

Chapter 9 Doubly stochastic matrices and bipartite graphs 163
  9.1 Convex representations of doubly stochastic matrices 163
  9.2 Matrices with a unique convex representation 166
  9.3 Permanents and perfect matchings 168

Chapter 10 Coverings 174
  10.1 Some examples of covering problems 174
  10.2 Vertex coverings and independent sets 179
  10.3 Dulmage and Mendelsohn's canonical decomposition 184
    Application 190
  10.4 Decomposition of partially ordered sets into chains 190

Chapter 11 Some combinatorial applications 192
  11.1 Systems of distinct representatives 192
  11.2 Generation of subsets of a set 198
  11.3 Pebbling in hypergrids 201
  11.4 Completing latin squares 205

Chapter 12 Bipartite subgraphs of arbitrary graphs 214
  12.1 Spanning bipartite subgraphs 214
  12.2 Covering the edges of a graph with bipartite subgraphs 218
    Applications 218
  12.3 Optimal spanning trees and the
    Travelling Salesman Problem 226
  12.4 The optimal spanning tree and optimal path problems 229

Appendix 232
