Social Learning

An Introduction to Mechanisms, Methods, and Models

William Hoppitt and Kevin N. Laland

PRINCETON UNIVERSITY PRESS

Princeton and Oxford
Acknowledgments ix

1 Introduction 1
What Is Social Learning? 3
Social transmission 5
Imitation 9
Innovation 9
Why Study Social Learning? 11
Summary of the Book 14

2 A Brief History of Social Learning Research 16
The Evolution of Mind 17
Social Learning Mechanisms 20
Animal "Culture" 24
The Diffusion of Innovations 27
Child Development 28
Cultural Evolution 30
Conclusions 31

3 Methods for Studying Social Learning in the Laboratory 33
Traditional Social Learning Studies 35
Alternative Experimental Approaches 38
  Transmission chain studies 40
  Diffusion studies 47
Contents

Innovation 50
The Biological Bases of Social Learning 52
  Neuroendocrinological studies 53
  Social learning of fear 54
  Neural mechanisms of observational learning 56
Conclusions 61

4 Social Learning Mechanisms 62
A Classification of Social Learning Mechanisms 63
  Stimulus enhancement 65
  Local enhancement 65
  Observational conditioning 68
  Response facilitation 69
  Social facilitation 70
  Imitation 70
  Observational R-S learning 77
  Emulation 77
  Opportunity providing 78
  (Inadvertent) coaching 79
Distinguishing Social Learning Mechanisms 80
  Stimulus enhancement 80
  Local enhancement 81
  Observational conditioning 83
  Response facilitation 85
  Contextual imitation 87
  Production imitation 89
  Observational R-S learning 92
  Emulation 93
  Opportunity providing 94
  (Inadvertent) coaching 96
A Pragmatic Approach to Characterizing Mechanisms of Social Transmission 96
  Teaching 98
  Summary 104

5 Statistical Methods for Diffusion Data 105
  Diffusion Curve Analysis 106
  Network-Based Diffusion Analysis (NBDA) 108
    Inclusion of individual-level variables 112
    Model selection and inference 114
    Modeling multiple diffusions 115
    Choosing a social network 120
    “Untransmitted” social effects 121
    Related methods 122
    Is NBDA realistic? 123
    Examples 125
Spatial Spread of a Behavioral Trait 125
  Wave of advance models 125
  Other approaches for spatial data 127
Summary 128

6 Repertoire-Based Methods for Detecting and Quantifying Social Transmission 129

The Group-Contrasts Approach 130
The Method of Exclusion 133
  Basic and advanced methods of exclusion 133
  Methods for assessing the genetic hypothesis 134
  Methods for assessing the ecological hypothesis 143
  Further problems with the method of exclusion 149
A Model-Fitting Approach 150
  A matrix regression approach 150
  Examples 151
  A return to group comparisons 154
A Causal Modeling Framework 155
  Relationship to the matrix regression approach 164
  Ruling out homophily 164
  Ruling out unknown ecological variables 167
  Relationship to the method of exclusion 168
Conclusions 168

7 Developmental Methods for Studying Social Learning 172

Observational Data 173
  Describing the developmental process 173
  Modeling probability of acquisition 177
  Modeling time of acquisition 179
  Modeling proficiency of trait performance 184
  Modeling option choice 185
  Limitations of observational data 188
Experimental Manipulations 188
  Diffusion experiments 189
  Manipulation of social experience 191
  Translocation studies 193
Conclusions 195

8 Social Learning Strategies 196

Why Social Learning Is Strategic 196
“When” Strategies 203
  Copy when established behavior is unproductive 203
  Copy when asocial learning is costly 205
  Copy when uncertain 210
  Copy when prior information is outdated 212
Contents

Copy when dissatisfied 213
Is copying a first or last resort? 214

“Who” Strategies 215
Frequency-dependent biases 216
Success biases 221
Kin and age biases 225

“What” Strategies 226
Random Copying 227

Statistical Methods for Detecting Social Learning Strategies 229
Meta-strategies, Best Strategies, and Hierarchical Control 232

9 Modeling Social Learning and Culture 235

Introduction 235
Why model? 235
Operationalizing the culture concept 237
Parallels between biological and cultural evolution 238

Theoretical Approaches to Social Learning and Cultural Evolution 239
Population-genetic style models of cultural evolution 239
Population-genetic style models of gene-culture coevolution 241
Neutral models and random copying 246
Social foraging theory 250
Spatially explicit models 251
Reaction-diffusion models 253
Agent-based models 254
Phylogenetic models 255

Conclusions 258

10 Conclusions 260
