## **PART I: FOUNDATIONS**

<b>1. An Introduction to Multivariate Design</b>	<b>1</b>
The Univariate and Bivariate Domain	1
The Tricky Definition of the Multivariate Domain	2
The Importance of Multivariate Designs	4
The General Organization of the Book	6
Recommended Readings	15
<b>2. Some Fundamental Research Design Concepts</b>	<b>17</b>
Samples and Populations	17
Variables	18
Scales of Measurement	19
Roles Played by Variables	24
Independent Variables, Dependent Variables, and Covariates	25
Between-Subjects and Within-Subjects Independent Variables	27
Latent Variables, Measured Variables, and Variates	28
Linking Latent Variables to Measured Variables	29
Degrees of Freedom	31
Statistical Significance	32
Statistical Power	38
Type I and Type II Errors	38
Recommended Readings	42
<b>3A. Data Screening</b>	<b>43</b>
Code and Value Cleaning	44
Distribution Diagnosis	45
Dealing With Missing Values	56
Outliers	65
Multivariate Statistical Assumptions	67

Data Transformations	71
Recommended Readings	73
<b>3B. Data Screening Using SPSS</b>	<b>75</b>
The Look of SPSS	75
Numerical Example	76
Data Cleaning: All Variables	76
Screening Quantitative Variables	79
Screening Categorical Variables	97
Results	105
3B Exercises	106
<b>PART II: THE INDEPENDENT VARIABLE VARIATE</b>	
<b>4A. Bivariate Correlation and Simple Linear Regression</b>	<b>107</b>
The Concept of Relationship	107
Strength of Relationship	114
Pearson Correlation for a Quantitative Variable and a Dichotomous Nominal Variable	118
Range (Variance) Restriction	120
The Scatterplot	121
Simple Linear Regression	127
Recommended Readings	136
<b>4B. Bivariate Correlation and Simple Linear Regression Using SPSS</b>	<b>137</b>
Bivariate Correlation	137
Simple Linear Regression	141
Results	145
4B Exercises	146
<b>5A. Multiple Regression</b>	<b>147</b>
General Considerations	147
The Variables in a Multiple Regression Analysis	148
Multiple Regression Research	148
The Regression Equations	150
The Variate in Multiple Regression	153
A Range of Regression Methods	154
The Standard (Simultaneous) Regression Method	154
Summary of the Solution for the Standard Regression Method Example	163
Step Methods of Building the Model	171
Evaluation of the Statistical Methods	175

Researcher-Controlled Methods of Building the Model	177
Outliers	179
Collinearity and Multicollinearity	180
Suppressor Variables	182
Linear and Nonlinear Regression:	
Completely Linear Models	184
Linear and Nonlinear Regression:	
Intrinsically Linear Models	185
Linear and Nonlinear Regression:	
Intrinsically Nonlinear Models	192
Canonical Correlation Analysis	193
Recommended Readings	195
<b>5B. Multiple Regression Using SPSS</b>	<b>197</b>
Data Screening	198
Checking for Multivariate Outliers	198
Setting Up the Standard: Multiple Regression Analysis	205
Interpreting Standard Multiple Regression Output	210
Results	218
5B Exercises	220
<b>6A. Logistic Regression</b>	<b>221</b>
The Variables in Logistic Regression Analysis	222
Assumptions of Logistic Regression	222
Coding of the Dichotomous Variables	223
The Logistic Regression Model	224
Evaluating the Logistic Model	238
Recommended Readings	240
<b>6B. Logistic Regression Using SPSS</b>	<b>243</b>
Setting Up the Logistic Regression Analysis	243
Results	252
6B Exercises	253
<b>7A. Discriminant Function Analysis</b>	<b>255</b>
Discriminant and Logistic Analysis Compared	255
Discriminant and Regression Analysis Compared	256
Assumptions Underlying Discriminant Function Analysis	256
Sample Size for Discriminant Analysis	257
Purposes of Discriminant Function Analysis	257
A Two-Group Discriminant Example	258
Recognizing the Discriminant Design	259
The Discriminant Function	259

Interpreting the Discriminant Function	261
Accuracy of Classification	262
Different Discriminant Function Methods	263
Recommended Readings	265
<b>7B. Two-Group Discriminant Function Analysis Using SPSS</b>	<b>267</b>
Overview of the Study	267
Summary of Canonical Discriminant Functions	270
Classification Statistics	275
Results	277
7B Exercises	278
<b>PART III: THE DEPENDENT VARIABLE VARIATE</b>	
<b>8A. Univariate Comparisons of Means</b>	<b>279</b>
The Strategy of Comparing Means	279
Measurement Error	280
The Ratio of Mean Difference to Measurement Error	280
One-Way Designs: Effects of One Independent Variable	283
Two-Way Factorial Designs:	
Two Main Effects and One Two-Way Interaction	288
Three Variations of Factorial Designs	290
Strength of Effect	294
Recommendations	301
Some Examples of Main Effects	
and Interactions: Overview	301
Example 1: Main Effects Not	
Significant, Significant Interaction	301
Example 2: Main Effects and the Interaction Are Significant	307
Example 3: Significant Main Effects	
and a Nonsignificant Interaction	310
The Transition to Multivariate Design	312
Recommended Readings	313
<b>8B. Univariate Comparisons of Means Using SPSS</b>	<b>315</b>
Numerical Example 1: Independent-Samples <i>t</i> Test	316
Results	319
Numerical Example 2: Paired-Samples <i>t</i> Test	319
Results	320
Numerical Example 3: One-Way Between-Subjects ANOVA	321
Results	327
Numerical Example 4: One-Way Within-Subjects ANOVA	328
Results	335

Numerical Example 5: One-Way Trend Analysis	335
Results	339
Numerical Example 6: Two-Way Between-Subjects ANOVA	340
Results	351
Numerical Example 7: Two-Way Mixed Design	352
Results	361
8B Exercises	362
<b>9A. MANOVA: Comparing Two Groups</b>	<b>365</b>
The Use of MANOVA	366
The Univariate $t$ Test	369
The Multivariate Hotelling's $T^2$	370
What to Do After a Significant Multivariate Effect	373
Special Issues Concerning Hotelling's $T^2$ and MANOVA	375
Power of Multivariate Tests	376
Statistical Assumptions and Limitations	377
Numerical Hypothetical Two-Group Example	379
Recommended Readings	383
<b>9B. Two-Group MANOVA Using SPSS</b>	<b>385</b>
Overview of the Study	385
Initial Data Screening	386
Univariate Outliers	388
Multivariate Outliers	389
Normality	389
Overview of the Two-Group MANOVA Analysis	390
Setting Up the Analysis	393
Results	402
9B Exercises	403
<b>10A. MANOVA: Comparing Three or More Groups</b>	<b>405</b>
The Univariate $F$ Test	405
Recommended Readings	412
<b>10B. MANOVA: Comparing Three or More Groups Using SPSS</b>	<b>415</b>
Recoding to Create Our Independent Variable	415
Initial Data Screening	418
MANOVA Dialog Boxes for the k-Group Case	425
Recommendations	430
MANOVA Output for the k-Group Case	430
Results	435
10B Exercises	437

<b>11A. MANOVA: Two-Way Factorial</b>	<b>439</b>
The Univariate and Multivariate Factorial Design	439
Advantages of Univariate and Multivariate Factorial Designs	440
Numerical Hypothetical Two-Way Factorial Example	441
The Time Dimension in Multivariate Data Analysis	447
Recommended Readings	451
<b>11B. MANOVA: Two-Way Factorial Using SPSS</b>	<b>453</b>
MANOVA Dialog Boxes and	
Output for the Two-Way Factorial	453
Results	461
11B Exercises	463
<b>PART IV: THE EMERGENT VARIATE</b>	
<b>12A. Principal Components and Factor Analysis</b>	<b>465</b>
How Factor Analysis Is Used in Psychological Research	465
Origins of Factor Analysis	466
Sample Size Issues	467
A Simplified Example: Correlations Near 1 and 0	468
Acquiring Perspective on Factor Analysis	475
Factor Analysis as an Umbrella Label	478
The First Phase: Component Extraction	479
Principal Components Versus Factor Analysis	488
Different Extraction Methods	491
Recommendations Concerning Extraction	493
The Second Phase: Factor Rotation	494
Reading Features of the Factor Analysis Printout	503
The Rotated Factor Matrix	505
Recommendations	510
Selecting the Factor Solution	511
Recommended Readings	513
<b>12B. Principal Components and Factor Analysis Using SPSS</b>	<b>515</b>
Preparing to Run a Principal	
Components Analysis With a Varimax Rotation	515
The Output From a Principal	
Components Analysis With a Varimax Rotation	520
Principal Axis Factoring With an Oblique Rotation	527
Results	533
12B Exercises	538

<b>13A. Confirmatory Factor Analysis</b>	<b>539</b>
Exploratory Versus Confirmatory Strategies	539
The Transition From Exploratory to Confirmatory Analysis	539
A Structural Approach to	
Exploratory and Confirmatory Factor Analysis	540
Confirmatory Analysis Is Theory Based	548
Overview of Confirmatory Factor Analysis	549
Model Specification	550
Model Identification	550
Model Estimation	556
Model Evaluation	557
Model Estimation: Assessing Pattern/Structure Coefficients	563
Model Respecification	564
General Considerations	567
Recommended Readings	568
<b>13B. Confirmatory Factor Analysis Using AMOS</b>	<b>569</b>
Preparing to Run a Confirmatory Factor Analysis	569
Examining the Output From a Confirmatory Factor Analysis	572
Overall Fit Indexes	573
Estimate Values for the Model	576
Model Respecification	578
Results	583
13B Exercises	584

## PART V: MODEL FITTING

<b>14A. Causal Modeling: Path Analysis and Structural Equation Modeling</b>	<b>585</b>
Principles of Path Analysis	586
Causality Is an Inference	587
Structuring the Path Analyses	594
The Multiple Regression Approach to Path Analysis	594
The Model-Fitting Approach to Path Analysis	597
Comparing Multiple	
Regression and Model-Fitting Approaches	598
A Path Analysis Example	599
The Multiple Regression Strategy to Perform a Path Analysis	600
The Model-Fitting Strategy to	
Perform a Path Analysis With Only Measured Variables	602
Structural Equation Modeling	611
Recommended Readings	617

<b>14B. Path Analysis Using SPSS and AMOS</b>	<b>619</b>
Multiple Regression Analysis	620
The Model-Fitting Program Approach	626
Using the Model-Fitting Method With AMOS	627
Examining the Results of the Respecified Model	634
Results (SPSS Version)	640
Results (AMOS Version)	641
Results (SEM Version)	642
14B Exercises	643
<b>15A. Applying a Model to Different Groups</b>	<b>645</b>
The General Strategy Used to Compare Groups	646
Testing for Invariance: Confirmatory Factor Analysis	648
Testing for Invariance: Path Analysis	651
Recommended Readings	653
<b>15B. Assessing Model Invariance     Between Groups Using AMOS</b>	<b>655</b>
Confirmatory Factor Analysis and Path Analysis	655
Testing for Invariance: Confirmatory Factor Analysis	655
Testing for Invariance: Path Analysis	666
Results (Factor Invariance)	669
Results (Path Invariance)	670
15B Exercises	671
<b>Appendix</b>	<b>673</b>
