Consciousness:
creeping up on the hard problem

Professor Jeffrey Gray
Department of Psychology
Institute of Psychiatry
Denmark Hill
London
Contents

Colour plates xi

Chapter 1. Stances towards the problem of consciousness 1

Chapter 2. The illusory narrative of consciousness 7
  2.1 Consciousness comes too late 7
  2.2 The world is inside the head 9
  2.3 Vision: perception versus action 15
  2.4 Illusions of the will 21
  Conclusions 25

Chapter 3. Where science and consciousness meet 27
  3.1 Scientific reduction in biology 27
  3.2 How does consciousness fit into neuroscience? 33

Chapter 4. Intentionality 35
  4.1 The binding problem 35
  4.2 Searle’s model 39
  4.3 The intentionality of conscious experience 40
  4.4 Unconscious intentionality? 43
  4.5 Harnad’s model for categorical representation 50
  4.6 Fitting intentionality into biology 52
  Conclusions 55

Chapter 5. Reality and illusion 57
  5.1 The unreality of the external world 57
  5.2 The paradox of illusion 61

Chapter 6. Enter qualia 65
  6.1 Consciousness in animals? 67
  6.2 Epiphenomenalism 71
Chapter 7. A survival value for consciousness? 75

7.1 Late error detection 75
7.2 The comparator system 77
7.3 The nature of conscious perception 80
7.4 The evolution of colour vision 85
Conclusions 87

Chapter 8. Creeping up on the hard problem 89

8.1 The assumptions 89
The scope of conscious experience 89
Perception models enduring features of the world 89
Survival value 90
The necessity of consciousness 90
Animal consciousness 90
Qualia 90
Qualia are constructed by the unconscious brain 91
Conscious experience is selective 91
Conscious experience comes too late to affect on-line processing and action 91
8.2 Late error detection vs change blindness 92
8.3 The nature of perception 96
8.4 Remediating error 98
Juxtaposition of controlled variables 98
Contextual disambiguation of action programs 99
Addition of new controlled variables 100
Modification of the value of reinforcers 103
Conclusions 104

Chapter 9. Epiphenomenalism revisited 107

9.1 Causality and consciousness 107
9.2 Language, science, aesthetics 111
9.3 Ongoing causal efficacy for consciousness? 114
9.4 The evolution and ontogeny of consciousness 117
Conclusions 121
Chapter 10. Scrutinising functionalism 123

10.1 Foreclosures 123
10.2 Conscious computers? 125
10.3 Conscious robots? 128
10.4 Functionalism 130
10.5 Experiments on synaesthesia 133
10.6 Function vs tissue 135
10.7 Implications of synaesthesia for functionalism 138
10.8 The alien colour effect 140
Conclusions 143

Chapter 11. From Cartesian theatre to global workspace 149

11.1 Is there a Cartesian theatre? 150
11.2 An egalitarian brain? 155
11.3 Executive functions 161
11.4 The global workspace 164
Conclusions 170

Chapter 12. The global neuronal workspace 171

12.1 The common communication protocol 171
12.2 Some neuronal specifics 173
Conclusions 179

Chapter 13. The neural correlate of consciousness 181

13.1 Activity in VI and visual awareness 182
13.2 The frontal connection 191

Chapter 14. Bottom-up vs top-down processing 195

14.1 Bottom-up and top-down combined 195
14.2 The hippocampus 197
   Hippocampal cell fields 197
   Spatial mapping 200
   Episodic memory 201
   A common hippocampal computational function? 206
14.3 Hippocampal function and consciousness 209

Chapter 15. Egocentric space and the parietal lobes 215

15.1 Spatial neglect 215
15.2 Balint's syndrome 223
15.3 Putting space together 225
15.4 The role of VI in veridical perception 228
15.5 Consciousness in a brain slice? 231
